**1**  
Your Blast outdoor stand will arrive in two bags with all parts and hardware including a rubber mallet for installation.

**2**  
Remove the base from the smaller bag and place it on the ground.

**3**  
Completely open all four legs of the base and place it into position on a level location for installation

**4**  
Your ground spikes are conveniently stored in each leg to minimize damage to the finish of the base.

**5**  
Remove the ground spikes from the leg storage and place the spikes through the holes on the end of each leg. Using the rubber mallet supplied, pound the spikes into the ground for a secure installation.

**6**  
Unroll the Blast Pole Bag to reveal the five Blast poles and hardware. Note that each pole is connected together in the order of their installation with bungee cord. The largest diameter pole will serve as the base and the smaller diameter poles will gradually get smaller toward the top.

**7**  
Remove each pole from the carry bag and carefully assemble them using the bungee cord as your guide. Once your pole lengths are together, make sure the hook eyelets are all facing the same direction and along the same line of site for an even flag installation.

**8**  
Attach the enclosed pole eye hooks to the pole eyelets and attach the flags to the pole eye hooks as shown. Attach all of your flags to the poles before placing them into the base. This will ensure that they are properly lined up and installed correctly.

**9**  
Carefully place each pole into the base in it's proper location. The center pole should go first followed by the surrounding poles. Try to balance each side of the base as you install the poles so you do not have all of the weight on any one side for any length of time.

**10**

Reverse steps 1 - 9 to repack your system. Flags can be stored inside Blast pole bags.
